

ABSTRACT

Novel compounds of formulae (I) to (VIII), which more particularly include
sulfonylurea derivatives, sulfonylthiourea derivatives, sulfonylguanidine derivatives,
5 sulfonylcyanoguanidine derivatives, thioacylsulfonamide derivatives, and
acylsulfonamide derivatives which are effective platelet ADP receptor inhibitors. These
derivatives may be used in various pharmaceutical compositions, and are particularly
effective for the prevention and/or treatment of cardiovascular diseases, particularly those
diseases related to thrombosis. The invention also relates to a method for preventing or
10 treating thrombosis in a mammal comprising the step of administering a therapeutically
effective amount of a compound of formulae (I) to (VIII), or a pharmaceutically
acceptable salt thereof.
